

Exercises Week 10

DSP

1. A signal $x[n]$ has a Z transform with one pole $p_1 = -0.5$ and one zero $z_1 = 0.9$. It is known that at $\omega = \pi$, the modulus of the Fourier transform is $|X(\omega = \pi)| = 1$.
 - a. Find the signals's Z transform $X(z)$
 - b. Compute the expression of $|X(\omega)|$ and $\angle X(\omega)$
 - c. Find the values $|X(\frac{\pi}{2})|$, $|X(\frac{-\pi}{2})|$ and $|X(0)|$
 - d. Sketch $|X(\omega)|$
2. Design the pole-zero plot of a signal with:
 - low frequency content
 - frequency content around the frequency $\omega = \frac{\pi}{2}$
